Backlog Item	Project Requirement
Event Tracking Logic	Track simulated phishing interactions without collecting credentials
Safe Landing Page	Provide educational phishing simulation interface
Reporting Dashboard	Display awareness metrics for campaigns
Role-Based Access Control	Restrict administrative functions to authorized users
Training Module	Deliver phishing awareness education after simulation interaction
Audit Logging	Maintain visibility into administrative activity
Data Retention Rules	Define retention and deletion procedures

Acceptance Criteria
System records click events and timestamps only
Landing page does not mimic live credential portal
Dashboard shows aggregate metrics only
Only approved roles can access admin functions
User receives short educational content and quiz
Administrative actions recorded in audit logs
Retention periods documented and enforced

Validation / Test Method	Ethical / Security Control
Run simulated click event and verify logs	No passwords or MFA data stored
Review against ethical safeguards checklist	No credential collection allowed
Validate report output using test campaign data	No individual surveillance reporting
Perform role access testing	RBAC enforcement required
Validate workflow using simulated interaction	Training content must remain educational
Review generated audit log entries	Logs must avoid sensitive data exposure
Review retention policy against governance requirements	Privacy-preserving data minimization
